and $a = a_1, \dots, a_n$ and $b = b_1, \dots, b_n$ tuples of elements of M and N , respectively. Write $\vec{a} \equiv_{\Gamma} \vec{b}$ if for every formula $\phi(x_1, \dots, x_n)$ from Γ we have:

$$M \models \phi(a_1, \dots, a_n) \Leftrightarrow N \models \phi(b_1, \dots, b_n).$$

We shall apply this for Γ the set of quantifier-free L -formulas and for L simple L -formulas; in which case we write $\vec{a} \equiv_{\text{qf}} \vec{b}$, $\vec{a} \equiv_{\text{simple}} \vec{b}$, respectively.

Lemma 2.7.4 *Let L be an arbitrary language. Suppose that an L -theory T has the following property:*

Whenever M and N are models of T , and $\vec{a} = a_1, \dots, a_n$, $\vec{b} = b_1, \dots, b_n$ tuples of elements of M and N , respectively, then $\vec{a} \equiv_{\text{qf}} \vec{b}$ implies $\vec{a} \equiv \vec{b}$.

Then T has quantifier elimination.

Proof. Assume that T has the property in the statement of the Lemma 2.7.2 we have to show that every simple L -formula is T -equivalent to a quantifier-free formula in the same free variables. So, let $\exists v \phi(v, \vec{w})$ be a formula, with $\vec{w} = w_1, \dots, w_n$ the free variables. Let $\vec{c} = c_1, \dots, c_n$ constants; we write $L_{\vec{c}}$ for $L \cup \{c_1, \dots, c_n\}$.

Let Γ be the set of all quantifier-free L -formulas $\psi(\vec{w})$ such that

$$T \models (\exists v \phi(v, \vec{c})) \rightarrow \psi(\vec{c})$$

Question (d). Prove that the amount of equivalence classes of elements of A with $k = 6$ and $n = 12$ equals 50.

With the same methodology as in Question (c) we can compute a table of $|A^g|$.
