Schedule

- Text document
- \langle Exercises \rangle
- Formulas
- Figures
- \langle Exercises \rangle
- Lists and Tables
- Finishing notes

Overleaf

The screenshot shows the Overleaf web interface. On the left sidebar, the 'New Project' button is highlighted with a red arrow. The main content area displays a list of projects in a table format. The table has columns for 'Title', 'Owner', 'Last Modified', and 'Actions'. The projects listed include 'hw2 datastructure Tim & Manuel', 'hw1 datastructure', 'lina_groepsopdracht_1', 'or_project_literatuur_tim_jio', 'presentatie_gr_ri_1', 'antwoorden_dictaat_getaltheorie', 'Enqueteverantwoording METEC', 'ISTAT Eindopdracht verslag', 'Eindrapport METEC', and 'Verwerkingsopdrachten week 1 tm 4'. Each project row includes a checkbox, a title, an owner (all are 'You'), a last modified date, and a set of action icons (share, clone, download, delete).

Title	Owner	Last Modified	Actions
<input type="checkbox"/> hw2 datastructure Tim & Manuel	You	2 months ago by You	
<input type="checkbox"/> hw1 datastructure	You	4 months ago by You	
<input type="checkbox"/> lina_groepsopdracht_1	You	a year ago by You	
<input type="checkbox"/> or_project_literatuur_tim_jio	You	a year ago by You	
<input type="checkbox"/> presentatie_gr_ri_1	You	a year ago by You	
<input type="checkbox"/> antwoorden_dictaat_getaltheorie	You	2 years ago by You	
<input type="checkbox"/> Enqueteverantwoording METEC Jaar 2 x METEC x	You	2 years ago by You	
<input type="checkbox"/> ISTAT Eindopdracht verslag Jaar 2 x	You	2 years ago by jioni_dboy	
<input type="checkbox"/> Eindrapport METEC Jaar 2 x METEC x	You	2 years ago by You	
<input type="checkbox"/> Verwerkingsopdrachten week 1 tm 4 Jaar 2 x	You	2 years ago by You	

Overleaf

New Project

[Cancel](#)[Create](#)

```
\documentclass{article}
\usepackage[utf8]{inputenc}

\title{Example project}
\author{Vincent Kuhlmann}
\date{February 2023}

\begin{document}

\maketitle

\section{Introduction}

\end{document}
```

Command syntax:

`\xxx{argument1}{argument2}`

`\xxx[optional argument]{argument1}{argument2}`

Example:

`\section{Introduction}`

- 1) **Backslash:** we are starting a command
- 2) **Command name:** 'section', place a header in the document. Takes 1 argument.
- 3) **Argument 1:** the name of the section

```
\documentclass{article}
\usepackage[utf8]{inputenc}

\title{Example project}
\author{Vincent Kuhlmann}
\date{February 2023}

\begin{document}

\maketitle

\section{Introduction}

\end{document}
```

Environment syntax:

```
\begin{xxx}
...
\end{xxx}
```

Example:

```
\begin{center}
```

- 1) **Begin:** We are starting the center environment
- 2) **Body:** The text to be centered on the page
- 3) **End:** Now go back to normal

```
\documentclass{article}
\usepackage{graphicx}

\title{Example project}
\author{Vincent Kuhlmann}
\date{September 2023}

\begin{document}

\maketitle

\section{Introduction}

\end{document}
```

Document structure:

- **Preamble.**
This is where configuration goes.
 - `\documentclass`: specify a template.
 - `\usepackage{xxx}`: import package 'xxx'.
 - Other: a.o. setting the title of your document
- **Document body.**
This is where the text and other content go.

What are packages?

L^AT_EX-code written by other people. They can add new commands, change how your document looks, or improve existing functionalities.

Example: package ‘xcolor’ provides the command `\textcolor{red}{some text}`.

Syntax: `\usepackage[aa=6cm,bb,cc=red]{xxx}`

Imports package ‘xxx’. The optional argument is a list of instructions.

Most essential packages

- **Math packages: amsmath, amssymb**

Defines `\begin{pmatrix}`-environment, which is a matrix with parentheses.

- **Layout packages: geometry**

```
\usepackage[a4paper,margin=2.54cm]{geometry}
```

- **Other: graphicx, babel**

Graphicx fixes and improves use of images, Babel translates default terms, e.g. 'Inhoudsopgave' instead of 'Contents'.

Available packages are managed by CTAN. On their website you find package manuals.

Exercises and examples from this presentation will not work if you forget required packages. For a good starting point, see <https://vkuhlmann.com/latex/example>.

Syntax for text?

```
\begin{document}
```

This is some text, very `\textbf{meaningful}` text.

On a new line? And I want spaces, lots of spaces.

This is some text, very `\textbf{meaningful}` text.

```
\end{document}
```

What does this look like in the output?

Syntax for text?

The fix:

```
...  
\usepackage{parskip}  
  
\begin{document}  
  
This is some text, very \textbf{meaningful} text.\  
On a new line? And I want\ \ \ \ \ spaces,  
\hspace{1cm}lots of spaces.  
  
This is some text, very \textbf{meaningful} text.  
\end{document}
```

Special characters

Exercises!

Slides and exercises are available at
texnicie.nl

Math

There are two ways to typeset math:

inline mode

The trigonometric identity is given by $\sin^2(\theta) + \cos^2(\theta) = 1$ for all θ .

display mode

The Pythagorean trigonometric identity is given by

$$\sin^2(\theta) + \cos^2(\theta) = 1 \tag{1}$$

The identity

$$1 + \tan^2(\theta) = \frac{1}{\cos^2\theta} \tag{2}$$

Is also called the Pythagorean trigonometric identity.

Inline math

Text and symbols between `\(` and `\)` are treated as **math symbols**.

```
\documentclass[a5paper]{article}
```

```
\begin{document}
```

The trigonometric identity is

given by `\(\sin^2(\theta) + \cos^2(\theta) = 1 \)`. This identity is also called the Pythagorean trigonometric identity.

```
\end{document}
```

The trigonometric identity is given by $\sin^2(\theta) + \cos^2(\theta) = 1$. This identity is also called the Pythagorean trigonometric identity.

Math packages

The following three packages are useful for typesetting mathematics:

```
\documentclass[a4paper, 10pt]{article}
\usepackage{amsmath}
\usepackage{amssymb}
\usepackage{amsthm}
\begin{document}
\[\mathop{ax^2 + bx + c = 0} \qquad \text{the general form of the quadratic equation}
\]
\end{document}
```

These provide options for adding text to formulae, extra symbols such as \boxplus , \rightsquigarrow and \mathbb{R} and better theorem and proof environments.

Basic math

Display math

There are many display math environments. Today we focus on the **align** environment.

The double angle formula can now be rewritten as

```
\begin{align}
\cos(2\theta) &= \cos^2\theta - \sin^2\theta \\
&= 2\cos^2\theta - 1
\end{align}
```

The double angle formula can now be rewritten as

$$\cos(2\theta) = \cos^2 \theta - \sin^2 \theta \tag{3}$$

$$= 2 \cos^2 \theta - 1 \tag{4}$$

Figure

Here you see a penguin:

```
\begin{center}  
  \includegraphics[height=2cm]{penguin.jpg}  
\end{center}
```

Photo by Sue Flood.

Here you see a penguin:

8

Figure placement

Specify one or more of the following characters:

- ▶ h (HERE): Figure can come here.
- ▶ t (TOP): Figure can come at the top of the page.
- ▶ b (BOTTOM): Figure can come at the bottom of the page
- ▶ p (PAGE): Figure can come on a special page for figures.
- ▶ !: Override internal parameters for floats.
- ▶ H (HERE): No floating, always here. (`\usepackage{float}`)

For example: `\begin{figure}[ht]`

When working with images: `\usepackage{graphicx}`

Dimensions

- Full linewidth

```
\includegraphics[width=\linewidth]{assets/pinguin.jpg}
```

- 90% linewidth

```
\includegraphics[width=0.9\linewidth]{assets/pinguin.jpg}
```

- Width maximally 90% linewidth and height maximally 5 cm

```
\includegraphics[  
    width=0.9\linewidth,height=5cm,keepaspectratio  
]{assets/pinguin.jpg}
```

Subfigure

```

\usepackage{subcaption}
...

\begin{figure}[htbp]

Exercises!

Slides and exercises are available at
texnicie.nl

Lists

There are three types of lists environments in latex.

enumerate is used for information that has order:

itemize is used for information that does not have order:

description is used for information that has descriptions for each item

Examples

Enumerated list	Itemized list	Descriptive list
Biggest cities of the Netherlands	Members of the TeXniCie	Tech companies
1) Amsterdam 2) Rotterdam 3) The Hague 4) Utrecht	<ul style="list-style-type: none"> ▪ Hanneke ▪ Thomas ▪ Vincent 	Apple Computer company Facebook Social media company Microsoft Software company

Lists

As with any environment you start with a `\begin` command and end with an `\end` command. In front of each item use the command `\item`. In case of the descriptive environment add square braces to assign a label to each item: `\item[label]`

Examples

Itemized list

```
\begin{itemize}

Descriptive list

```
\begin{description}
\item[Apple] Computer company
\item[Facebook] Social media company
\item[Microsoft] Software company
\end{description}
```

Tables

Tables are made in the **tabular** environment. When making a table you start with `\begin{tabular}`. Afterwards, an extra parameter must be given that tells Latex how the table will be formatted. For example `{1 1 1}` tells us that we want a table with three columns that are aligned to the left.

Inside of the tabular environment a new column is made with the `&`-symbol and a new row with `\\`.

Example

Name	Population
Amsterdam	903,399
Rotterdam	655,468
The Hague	553,417

```
\begin{tabular}{1 1 1}
Name & Population\\
Amsterdam & 903,399\\
Rotterdam & 655,468\\
The Hague & 553,417\\
\end{tabular}
```

Tables

You have now learned how to make a table, but it would be nice if we could have separator lines between rows and columns. For the columns you can add a pipe symbol between columns in the parameter. For separator lines between rows the command `\hline` is used.

Example

Name	Population
Amsterdam	903,399
Rotterdam	655,468
The Hague	553,417

```
\begin{tabular}{||l | l||}
  \hline\hline
  Name & Population\\\hline
  Amsterdam & 903,399\\\hline
  Rotterdam & 655,468\\\hline
  The Hague & 553,417\\\hline\hline
\end{tabular}
```

Tables

Parameter options:

l Align columns to the left.

c Align columns to the centre.

r Align columns to the right.

Also note that just like images, tables can have captions and labels

Example

Name	Population
Amsterdam	903,399
Rotterdam	655,468
The Hague	553,417

Table 1: Biggest cities of NL

```
\begin{table}
\begin{tabular}{|l|c|}
...
\end{tabular}
\caption{Biggest cities of NL}
\label{table:BiggestCitiesNL}
\end{table}
```

Lists and Tables
